high, slightly villous above; involucre campanulate, 1.5-2 cm. high; bracts oblong-ovate, acute, nearly glabrous, often with a rose-colored spot in the middle; corolla rose-colored; achenes about 1 cm. long, as well as the short beak strongly striate.

In habit and flowers this resembles most A. aurantiaca, but is glabrous and glaucous, and the achene with its short beak places it in the A. glauca group.

Colorado: Bear River, 20 miles below Steamboat Springs, 1899, Osterhout.

Agoseris humilis sp. nov.

Leaves spreading or ascending, oblanceolate or linear-oblanceolate, 6–10 cm. long, entire or denticulate, glabrous or slightly hairy on the short petioles; scape 1–1.5 (seldom 2) cm. high, slightly villous below the head; involucre 1.5–2 cm. high; bracts linear-lanceolate, slightly villous-ciliate; corolla rose-purple, or at first orange; achenes 12–15 mm. long, with a long, scarcely striate beak.

This is closely related to A. gracilens, but differs in the low habit, small heads and more spreading leaves. It grows at an altitude of about 2700 m.

Colorado: Ironton Park, 1901, Underwood & Selby 308 (type); Tennessee Pass, 1902, Osterhout 2710.

Agoseris rostrata sp. nov.

Leaves narrowly linear-lanceolate, about 2 dm. long, usually more or less laciniate with linear lobes, glabrous and glaucous; scape 2-6 dm. high, more or less villous, especially under the head; involucre fully 3 cm. high; outer bracts oblong or ovate, obtuse, glabrous, about half as long as the elongated linear or linear-lanceolate inner ones; corolla orange or purple; achenes fully 2 cm. long, with a very long and slender, not striate, beak.

In habit this most resembles A. elata, but the bracts and the achenes associate it with A. grandiflora.

Colorado: Lower Boulder Cañon, 1901, Osterhout 2478 (type); between Sunshine and Ward, 1902, Tweedy 4895.

Taraxacum leiospermum sp. nov.

Leaves spreading, oblanceolate, less than I dm. long, dark-green, obtuse or acutish, retrorse-dentate, rarely lobed; scape about I dm. high, slightly villous when young; outer bracts 7—10 mm. long, lanceolate with spreading tips; inner linear, about
