

1. *Crepis heterophylla*, *Hemsl.*, n. sp.

*Herba* biennis?, 2-3 ped. alta, undique glaberrima, caulibus subsimplicibus crassiusculis striatis. *Folia* membranacea, radicalia lyrato-pinnatifida, 6-8 poll. longa, segmento terminali multo majore hastato-trilobato, segmentis lateralibus parvis distantibus; folia caulina petiolata, inferiora alte hastato-trilobata, superiora lanceolata, longe acuminata acutissima, omnia remotissime callosodenticulata. *Capitula* fere omnino ut in *C. japonica*, dense corymbosa. *Achænia* fusca, crostrata, multistriata, puberula.

HUPEH: Ichang and immediate neighbourhood (*A. Henry!*).  
Herb. Kew.

This approaches very closely the form of *C. japonica* formerly treated as a distinct species under the name of *C. runcinata*, and it is certainly possible that this also is a variety of *C. japonica*, as well as our *C. longipes*, for, with the exception of stature and foliage, there are no very obvious differences.
