

H E

HEDYPNOIS, Trailing crooked-seeded Hawkweed.

The Characters are;

The Cup of the Flower is like a striated Column, or a Melon: the little Leaves of the Flower-cup, when the Flower is fallen off, embrace each of them one single umbilicated Seed; but in the Middle of the little Head are other naked Seeds, which form an Head.

The Species are;

1. **HEDYPNOIS annua**. Tourn. Trailing crooked-seeded Hawkweed, or common Hedypnois.

2. **HEDYPNOIS minor Cretica annua**. Tourn. Cor. Annual Hedypnois from Crete.

3. **HEDYPNOIS annua, capitæ maximo**. Boerb. Ind. Annual Hedypnois, with a large Head.

These Plants are seldom propagated, except in Botanic Gardens, for the sake of Variety, as being Plants of no great Beauty or Use. The first and third Species are found wild in the Southern Parts of France, in Spain, and Italy; but the second Sort was brought from Crete by Monsieur Tournefort. These may all be propagated by sowing their Seeds toward the latter End of March, or the Beginning of April, in an open Situation, and a dry Soil, where they may remain to flower and seed; for they care not to be transplanted. The Distance which these Plants should be allowed, must not be less than a Foot; and if the Soil be good, a Foot and an half asunder will be full little enough; for they are very apt to spread to a great Distance; and their Branches trailing upon the Ground, would occasion their rotting, were they to stand too close together. These Plants produce their Flowers in June and July; and their Seeds are perfected in August, when

H E

they should be gathered, and preserved for the succeeding Year.

HEDYSARUM, French Honey-suckle.

The Characters are;

It hath papilionaceous Flowers, which are collected into an Head or Spike: the Pointal of the Flower, rising out of the Empalement, becomes a jointed undulated Pod; in each of which Joints is lodged a kidney-shaped Seed.

The Species are;

1. **HEDYSARUM clypeatum, flore suaviter rubente**. H. Eyst. French Honey-suckle, with a delicate red Flower.

2. **HEDYSARUM clypeatum, flore albido**. Tourn. French Honey-suckle, with a whitish Flower.

3. **HEDYSARUM clypeatum minus, flore purpureo**. Raii Hist. Smaller French Honey-suckle, with a purple Flower.

4. **HEDYSARUM triphyllum Canadense**. Cornut. Three-leav'd Canada French Honey-suckle.

5. **HEDYSARUM annuum, siliqua aspera undulata intorta**. Tourn. Annual French Honey-suckle, with a rough waved and wreathed Pod.

6. **HEDYSARUM Alpinum, siliqua lævi, flore purpuro-cæruleo**. Tourn. Alpine French Honey-suckle, with a smooth Pod, and a blue purple Flower.

7. **HEDYSARUM Alpinum, siliqua lævi, flore albido**. Tourn. Alpine French Honey-suckle, with a smooth Pod, and a white Flower.

8. **HEDYSARUM minus diphyllum, flore luteo**. Sloan. Cat. Smaller two-leav'd French Honey-suckle, with a yellow Flower.

9. **HEDYSARUM triphyllum fruticosum, flore purpureo, siliqua varie distorta**. Sloan. Cat. Three leav'd shrubby French Honey-suckle, with a purple
