

Planta facie *Crepidis pygmaea*, 3-4-pollicaris, foliorum limbus diametro 9-15 lin. latus, capitula florifera 7 lin. longa.

§ 4. *Micranthæ.*

19. **L. rosularis**, glabra glaucescens, radice verticali crassiusculâ, foliis dense rosulatis majusculis obovato-oblongis obtusis margine minute et crebre undulato-denticulatis denticulis spinulosis basi attenuatis breviter petiolatis, caulinis pumilis a basi divaricatis et dichotome ramosissimis ramisque tandem incrassatis, foliis caulinis ad dichotomias minutissimis squamiformibus basi obtuse auriculatis, capitulis minimis terminalibus et alaribus brevissime pedicellatis oblongo-cylindricis, involucri glabri phyllis obtusis apice nigro-sphaelatis ad externis ad intima auctis, flosculis , achenis nigris minimis ellipticis basi subattenuatis laevissimis tenuiter marginatis utrinque tenuiter uninerviis apice abrupte mucronulatis rostro albo fugaci subæquilongo terminatis, pappo albo ②.

Hab. in Persia australi inter Jezd et Ispahan et inter Ispahan et Teheran prope Nasrabad et Schurab (Bge exs. 226!), in prov. Khorassan (Bge!).

Folia radicalia 1 $\frac{1}{2}$ -3 pollices longa, caulis cum panicula demum divaricatis-simâ 3-6 pollices longus et latus, capitula fructifera 4 lineas longa.

20. **L. undulata** (Ledeb. Fl. Act. IV, p. 156) glabra vel cris-pule papillosa, caulis e collo unico vel pluribus pumilis erectis a basi vel superne dichotome ramosis corymbosis oligocephalis, foliis radicalibus obovatis dentatis vel lyratis, caulinis a basi obtuse et minute auriculata in lacinias oblongas sinuatas vel triangulares aut lineares integras obtusas pinnatisidis partitisve, capitulis breviter pedicellatis tenuiter cylindricis paucifloris fructiferis valde elongatis, involucri glabri phyllis paucis obtusiusculis ab infimis ovatis squamæ-formibus ad interiora demum valde elongata abeuntibus, flosculis cœruleis, achenis obovato-oblongis compressis anguste marginatis et scabridis utrinque elevatim uninerviis transverseque rugulosis apice breviter et abrupte mucronatis, rostro setaceo albo achenio 3-4-plo longiore basi fissâ bicruri ejus spicem amplectente, pappo sordide albo ③. Ledeb. Ic. tab. 129.

Hab. in rupestribus apricis, radices montis Sinai loco Bestan (Schimp. 138!), Armenia Turcica inter Diarbekir et Karput in subalpinis (Noë!), Armenia Rossica inter Nackitschewan et Ordubad (Koval!), Persia media orientalis ad Ssertschah (Bge!), australis prope Fasa (Auch. 4861!), Turkestania ad mare Caspium et in deserto Kisilkum (Lehm!), Belutschia (Stocks!).

Icon citata formam exhibet majorem vulgari que etiam fructifera 5-6 pollices vix excedit. Rostri baseos structura peculiaris.

Ar. Geogr. Songaria, Sibiria Uralensis et Altaica.

21. **L. glaucifolia**, caulis decumbentibus saepius nanis rarius elongatis folia radicalia parum superantibus dichotomis laxe
