

**Martinezia Ulei** U. D. n. sp. — Truncus? Folia vaginata, vagina albido-tomentosa, squamis numerosis atro-brunneis paulo longioribus dense tecta, aculeis atro-brunneis parvis armata, petiolo quadrangulo dorso convexo albido-tomentoso, squamis atro-brunneis paulo longioribus tecto, aculeis magnis atro-brunneis armato, rhachide initio quadrangula, apicem versus triangulari, dorso convexo, albido-tomentosa squamis atro-brunneis sparsis tecta, aculeis acicularibus, basin versus applanatis, maxima parte squamis albidis dense tectis, ad 3,5 cm longis armata, segmentis 3—5 aggregatis, elongato-cuneatis, apice tricuspidatis, supra glabris, subtus pubescentibus, marginibus lateralibus integris sparsim setosis, margine apicali dentato-crenato, dentibus erosis, margine superiore longe producto, ad 35 cm longis, 10 cm latis. Inflorescentia longe pedunculata, spatha exteriore apicem versus membranacea, extus albido-tomentosa squamis atro-brunneis paulo longioribus dense tecta demum in fibros soluta, spatha interiore elongato-lanceolata sublignosa, albido-tomentosa, squamis atro-brunneis densiuscule tecta, aculeis parvis sparsis armata, ca. 60 cm longa, 3 cm lata; inflorescentiae rami numerosi simplices, ad 26 cm longi, basi 3 mm lati, tortuosi, dense floribus tecti; flores in eodem spadice monoeci, terni, bini vel apicem versus singuli uno femineo in glomerulo infra masculinos; flores masculini calyce parvo subhyalino tripartito lobis elongato-lanceolatis, carinatis basi subcalcaratis, 1,5 mm longis, 0,25 mm latis, corolla 3-petala, petalis crassis valvatis, ovatis, acuminatis 3 mm longis, 1 mm latis, staminibus 6 basi coalitis et petalis adnatis, filamentis quoad liberis 1 mm longis, antheris oblongis, dorso paulo infra medium affixis 1,5 mm longis, ovarii rudimentum globosum 0,5 mm diametro; flores feminei calyce tripartito, lobis imbricatis late cordato-ovatis breviter acuminatis, 1 mm longis, 1,5 mm latis, corolla tripetala petalis valvatis, ovatis, acutis 1,5 mm longis, 1,5 mm latis, staminodiis triangularibus petalis adnatis 0,5 mm longis, ovario breviter stipitato, globoso-ovato 1 mm diametro, stigmatibus tribus sessilibus. Fructus rubri.

Peru: Alto Acre, Seringal Auristella (E. ULE n. 116<sup>b</sup> — April 1911).

**Acrocomia Ulei** U. D. n. sp. — Truncus? Folia petiolata, armata, vagina glabra aculeis tantum armata, petiolo ca. 40 cm longo glabro, concavo-convexo, aculeis numerosis atro-fuscis 1—3,5 cm longis, nitidis, leviter applanatis, basi  $\pm$  squamis adpressis tectis, armata, rhachide ca. 1 m longa triangulata, dorso convexo aculeis 1—3,5 cm longis leviter applanatis atro-fuscis nitidis, basi imprimis marginibus  $\pm$  squamis adpressis tectis apice minutis acicularibus 2—3 mm longis armata, pinnis numerosis utroque latere ultra 60 subaequidistantibus suboppositis linearibus acutis, apice non raro oblique breviter bifidis, supra glabris,
